

## Personal care Functional ingredients

High performance ingredients & solutions for Personal Care

Customized & tailor made projects

Complete customer support: regulatory, formulation, technical & marketing

Transparent & ethical supply chain

Commitment to NIP<sup>®</sup> PROGRAM for a sustainable development

ISO 9001 and GMP certifications

[www.roelmihpc.com](http://www.roelmihpc.com)

ROELMI HPC is now the global expert for actives and functionals in Health & Personal Care.

But its roots date back to 1946 in the Mediterranean area, where the company still finds concepts and innovation-driven technologies, in full respect of nature and people.

Our program NO IMPACT IN PROGRESS® (NIP) applies to all products and technologies, and it stands as a mission for every process focusing on Quality, People safety and Environment preservation.

**We believe that only the daily action in respect to Environment could lead to a durable result.**

## Practicing Sustainability in every day life

### Our contribution to Personal Care

#### OLIFEEL® LINE

High-quality Olive fruits, coming from a transparent and traceable Italian supply chain.

By isolating purified fractions, each element of the line results in such purity. The process of Olive fraction purification happens once they have already exited the agro-food production chain (e.g. surpluses, non-edible fractions, etc), so they do not subtract food or land to people and minimize waste and by-products (*Biorefinery* concept).

**Olifeel® TD7525:** unique synergy between di- & tri-glycerides fractions of olive oil. Ideal to modulate and improve stability and emulsification, as well as to carry active and functional ingredients into the skin.

**Olifeel® Pearls:** innovative natural oil-phase gelling agent with stabilizing properties for any oil-containing formula. It is able to replace all synthetic and semi-synthetic gelling agents for lipophilic phases.

**Olifeel® Emulsifiers:** primary emulsifier systems for O/W and W/O formulas. Interesting sensorial profile and pleasant skin-feel, they are easy-to-formulate (no co-emulsifier needed).

#### CELUS-BI® LINE

Celus-BI® results come from an innovative way of making cosmetic, with a natural background, but without any interference with the food supply chain.

By this way, it is possible to create ingredients without producing waste, aiming at an impact zero on the environment, instead of just a reduction of energy usage or pollutants emission.

**Celus-BI® Esters:** biodegradable esters. Ethical alternative to silicones. Proved performances in pigments and UV filters dispersion as well as formula texture improvement.

**Celus-BI® Feel:** biodegradable texturizers. Ideal alternative to plastic microbeads. Proved performances in formula stability and actives delivery. Soft focus and sebum control effect.

**Celus-BI® Sphera:** biodegradable exfoliants. Ideal alternative to plastic microbeads in rinse-off applications.
